EDUCATION

University of Texas at Austin	Bachelor of Business Administration, Management Information Systems Certificate: Elements of Computer Science	May 2027
--------------------------------------	--	-----------------

EXPERIENCE

EA (Electronic Arts) – <i>Operations Analyst Intern</i> ; Austin, TX	May 2026 – August 2026
---	-------------------------------

- Scoped and shipped an internal community-monitoring tool end-to-end (Python scraper, GitHub Actions, Streamlit dashboard) after identifying EA's existing process as a known org-wide gap; built the case for leadership adoption
- Navigated ambiguous third-party platform-policy risk by independently researching enforcement precedent and API constraints, then made a documented go/no-go call pending legal review instead of stalling delivery
- Standardized the historical data-collection window across 5 games with unequal data availability, so cross-franchise comparisons wouldn't be skewed by which game simply had more history available

University of Texas System – <i>Client Analyst Associate</i> ; Austin, Texas	May 2025 – May 2026
---	----------------------------

- Provided hands-on technical support for 300+ monthly tickets spanning new-hire equipment setup, network connectivity, and hardware issues — diagnosing root cause when the first fix didn't resolve it
- Resolved 80+ tickets/month, personally handling over 27% of the team's total ticket volume across onboarding, connectivity, and incident response

University of Texas at San Antonio – <i>Bold Careers Data Intern</i> ; Remote	August 2025 – December 2025
--	------------------------------------

- Explored ServiceNow's AI and data-science tooling, running simulations on a 10,000+ record dataset to model how AI-driven automation could affect platform operations
- Presented simulation findings and platform recommendations to program leadership; work was featured in the program's analyst showcase

Bobo Co-Living Made Simple – <i>Product Analytics Intern</i> ; Austin, TX	September 2024-December 2024
--	-------------------------------------

- Identified that new users struggled with blank-slate onboarding; partnered with design to prototype 25 scenario-based templates (household tasks, shared finances, fitness routines) in Figma to reduce time-to-value and increase activation
- Designed and ran A/B test with 60/40 split across 200+ new users to validate template impact on engagement; templates drove 30% higher task creation and 25% lift in monthly active users
- Synthesized experiment results and user feedback into feature recommendations, helping prioritize the template expansion roadmap based on usage and support trends

PROJECTS

OTIS Help Desk Training Optimization Project - <i>Client; University of Texas System</i>	August 2025
---	--------------------

- Analyzed 17,000+ historical support tickets to identify onboarding knowledge gaps, finding that ~40% of escalations stemmed from five recurring, poorly documented issue types
- Proposed a centralized, data-informed onboarding framework adopted by management as a reference for future training improvements

LEADERSHIP EXPERIENCE & ACTIVITIES

Texas Product Catalyst – <i>Logistics Lead</i>	January 2024 – May 2025
---	--------------------------------

- Owned operational infrastructure for 50+ member student product org; evaluated vendor options and cost tradeoffs for domain hosting and event tools, reducing ops costs 50% while maintaining team functionality

SKILLS AND ADDITIONAL INFORMATION

Product: A/B testing, funnel analysis, metrics design, user research, product scoping

Technical: Technical: SQL, Python, data modeling, REST APIs, JavaScript, React, Node.js

Honors: University Honors (2023), Snowflake Data Warehousing Workshop (2025)

Work Eligibility: Eligible to work in the U.S. with no restrictions
